

SAT Machete™

a proxy video and metadata ROUGHCUTTER

powered by **SAT** Smart Acquisition Technology™

NL Technology announces Machete, a light weight proxy editor to trim, arrange clips and manage data from your IT camera

Use your cameras proxy and start editing in the field. Quickly cut videos which can later be imported into Avid editors with the higher resolution video for production

Distribute rough cut edits to other Machete or Avid users anywhere in the world via SATProxyNet.com or install a private ProxyNet web-server

Post the SAT rough-cut onto a secure website:

- *collaborate with peers to produce and approve a final cut-list*
- *download the SAT cut-list and media into the Avid*
- *send the finished sequence with high resolution content to AIR*

Features:

- Supports FieldPak, P2 and XDCAM Proxy files including metadata
- Simple to use trimming interface for rapid storyboarding
- Customizable logging tool provides consistent data input
- Create Avid compatible sequence play lists that link to high resolution SD or HD footage
- Create preview videos in multiple video format types and variable video bit-rates
- Publish to Windows Media™ Player Mobile devices and Video IPOD devices

Get the most from your proxy: trim, add comments, create sequences, for anyone to preview anytime, anywhere

Benefits:

- **Preview, edit and distribute** proxy video quickly and easily
- **Interoperability** using the Windows standard file format for network distribution
- **Review video** on any computer that supports the Windows Media™ Player
- **Create your own playlists**, use the browser or Windows Media™ Player to sort and reorder the proxy files easily
- **Share Proxy** using memory sticks, CDs, DVDs, network shared storage, email or web site distribution
