

NLT Nearchive™

There is no substitute for a lots of storage

NLT's Nearchive is the first caching appliance of its kind to move MXF media between Avid ISIS and the Nearchive automatically. Use economical Raid storage to save clips near-line until they are needed again. Full Interplay integration allows advanced searching for these clips.

NL Technology introduces Nearchive for Interplay. Move clips from valuable Avid ISIS Storage to near-line storage and back using your Interplay workstation.

Clips are retained in Interplay where rich metadata can be searched using Interplay Access to find the clip. When the clips are found, drag and drop them on the restore icon and the MXF media is restored to the ISIS workspace at over 100 megabytes/sec.

NLT Nearchive is compatible with NLT's AutoIngest. Setup AutoIngest to ingest Panasonic P2, Ikegami GFCAM or Sony XDCAM clips into ISIS/Interplay. Nearchive instantly moves a copy to near-line storage and locks the clip's metadata into Interplay for later searches.

Nearchive Features

- Fully integrated into Avid Interplay
- Automates moving valuable clips to near-line storage
- Integrates seamlessly with AutoIngest
- Supports automatic hands free operation
- Preserves all enhanced camera metadata for searching using Interplay Access, find clips stored near-line quickly
- Move clips from near-line storage to Avid ISIS FAST
- Implement automatic ingest and short term archive of Panasonic P2, Ikegami GFCAM or Sony XDCAM media. Fully manage these stored clips with Avid Interplay
- Feel free to clean out the NEWS workspace at the start of each day. All your camera crew's media can be kept for months in near-line Raid-5 storage. Fully searchable using Interplay and quickly restored
- You will be ready when Yesterday's News is News Today

Do More by Doing Less

Cost Savings and Benefits

- No changes to your staff's workflow, automatically keep all your media around for reuse... ***because, you know you will need it again soon...***
- Keep all your recent news footage near-line and instantly searchable
- Immediate cost savings by moving valuable clips off ISIS onto near-line Raid-5 storage until needed again
- Use Avid Interplay Access to search the near-line storage. Standard tools require no retraining.
- Rich metadata gathered by NLT's AutoIngest streamlines the workflow
- AutoIngest automatically queues a MXF media copy to near-line storage
- Feel free to delete the clips from Interplay when today's news is done, SAT Nearchive has the MXF files archived near-line and Metadata locked into Interplay
- Don't use a USB drive to save your expensive camera memory cards, use Nearchive and Interplay to catalog, find and reuse them stored as Avid MXF Clips
